

## Autumn Lawncare Care Notes

### What we do on this treatment:

### Autumn Feed & Moss Control

Our lawn expert says the treatment will:

Feed applied cares for the roots and fights against disease.

Moss control applied, which reduces plants ability to reproduce next seasons moss

### What we do.

Our autumn feed is high in phosphates and potash. This will help develop strong roots, which will promote healthy leaves and disease protection.

### Moss Control

The moss control will normally show signs working by turning brown to black. To prevent moss from thriving in the future, it makes sense to tackle its cause.

### Autumn lawn cutting advice:

Correct mowing will make the difference between a “so-so” lawn and a great one.

Recommended cut frequency: **Every 7 – 10 days**

Benefits: **Helps thicken the lawn plus helps with moss control**

### Recommended Cutting Height

Grass Type	Early Spring, Autumn & Winter	Late Spring & Summer
Family / Multi e.g. back lawn	Cut Height 3cm (1.5")	2.5 cm (1")
Luxury e.g. front lawn	Cut Height 2cm (0.75")	1.5 cm (0.5")

Do not mow more than a third off the height of grass in one cut.

Adjust the mowing height for the season.

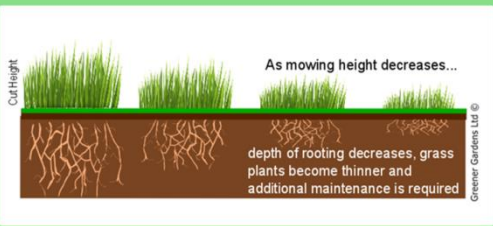

During the autumn months the grass with regular cutting will “thicken” in density. This will make a huge difference next spring.

**Keep the lawn clear** - Collect any fallen leaves. If left, they weaken the grass leading to bare patches and the spread of pests and disease.

**Little and often is the best approach**

### The importance of cutting height:

### Cutting Height and Lawn Health

As mowing height decreases...  
depth of rooting decreases, grass plants become thinner and additional maintenance is required

Adjust the mowing height for the season.  
Do not mow more than a third of the height of grass in one cut.

### Mowing wet grass – top tips

- **Dry off the lawn first:** use a length of hose or brush and drag across the lawn. This will disperse any water down into the soil.
- **Mow in the afternoon or evening:** choose a dry day which gives the grass leaves a chance to dry
- **Choose a windy day:** it will assist in drying the lawn
- **Clean the mower:** grass left from a previous cuts attracts wet grass like a magnet

A sharp mower is even better.

### Now is a great time to Aerate and apply Soil Improver

Improving soil conditions following summer use will assist drainage which in turn will encourage deeper rooting grass plants and promote even healthier grass.
